

**STATE OF SOUTH CAROLINA  
BEFORE THE PUBLIC SERVICE COMMISSION**

**DOCKET NO. 2000-0210-W/S**

**IN THE MATTER OF:**

**Application of United Utility Companies, Inc.  
for an Adjustment of Rates and Charges for  
Provision of Water and Sewer Service**

**DIRECT TESTIMONY OF**

**MICHAEL A. BLEIWEIS**

**ON BEHALF OF**

**THE CONSUMER ADVOCATE OF SOUTH CAROLINA**

**January, 2002**

Appendix A

SCHEDULES

1    **I.     STATEMENT OF QUALIFICATIONS**

2    **Q.     Please state your name and business address.**

3    A.     My name is Michael A. Bleiweis and my business address is 243 Banks  
4           Road, Easton, Connecticut.

5    **Q.     By whom are you employed?**

6    A.     I am employed by The Woodside Group, Inc., a financial and management  
7           consulting firm.

8    **Q.     What position do you hold with The Woodside Group and in what  
9           endeavor do you specialize?**

10   A.     I am a principal specializing in testifying on various financial and  
11           accounting issues, especially revenue requirement determination, in public  
12           utility rate cases. Over the course of my career, my services have been  
13           utilized by various consumer advocate and public interest groups and by  
14           public utilities.

15   **Q.     For whom are you testifying in this proceeding?**

16   A.     I am testifying on behalf of the Consumer Advocate.

1    **Q.     What is your educational background?**

2    A.     I am a graduate of Syracuse University with a Bachelor of Arts degree in  
3           Political Science and of New York University Graduate School of Business  
4           Administration with a Masters of Business Administration degree in  
5           Financial Analysis and Securities Analysis.

6    **Q.     What has been your business experience?**

7    A.     In 1973, I was employed as an economic research consultant with the firm  
8           of National Economic Research Associates (NERA) where I was involved  
9           in the preparation of rate of return exhibits that were based upon computer  
10          modeling for various utility companies.

11          In 1974, I joined the firm of Citizens Utilities Company as a Revenue  
12          Requirements Analyst. My duties included the preparation of financial  
13          exhibits and testimony for various electric, water, gas and sewer company  
14          rate cases.

15          In 1977, I joined American Water Works Service Company as Director of  
16          Rates and Revenue of the Eastern and New England Divisions of  
17          American Water Works Company, Inc. I was charged with the  
18          responsibility of preparing financial exhibits, supporting data and testimony  
19          for use in rate hearings for a total of thirteen water companies in New  
20          England, New York and New Jersey.

21          I have been employed by The Woodside Group since 1979.

1    **Q.    Please describe further your experience in regulatory matters.**

2    A.    Attached as Appendix A is a listing of the proceedings in which I have  
3           testified or participated concerning the proper determination of revenue  
4           requirements and other rate-related topics.

1    **II. SUMMARY OF METHODOLOGY**

2    **Q.    Mr. Bleiweis, will you please summarize the source material you**  
3        **utilized in preparing this testimony and the accompanying**  
4        **schedules?**

5    **A.    My testimony and schedules are primarily based upon company replies to**  
6        **the Consumer Advocate's four sets of interrogatories, replies to Staff data**  
7        **requests, the company's application and company testimony.**

8    **Q.    What methodology have you utilized in determining the revenue**  
9        **requirement for the company?**

10   **A.    I have utilized the rate base/rate of return methodology. Unlike many**  
11        **water and wastewater utilities located in South Carolina whose plant was**  
12        **contributed by developers, thereby resulting in small or even negative rate**  
13        **bases, United Utility Companies' rate base is significant enough to**  
14        **determine a proper revenue requirement by using the rate base/rate of**  
15        **return methodology.**

1    **III. TEST YEAR**

2    **Q.     What test year has the company utilized for this proceeding?**

3    A.     The company has utilized calendar year 2000 as a test year, even though  
4           this data is over a year old.

5    **Q.     What is the problem with using an out-of-date test year for regulatory  
6           purposes?**

7    A.     Since the test year is so old, it is probable that the revenue and expense  
8           data is not representative of future expenditures and, therefore, the  
9           resultant rates that ratepayers have to pay may be skewed upward.

10   **Q.     Please comment about the purpose of a test year in regulatory  
11          proceedings.**

12   A.     In its Order in the recent Carolina Water Service (CWS) rate case (Order  
13          No. 2001-887), the Commission included the following quote from the  
14          Charles Phillips text *The Regulation of Public Utilities* regarding the  
15          purpose of a test year:

16                    "The Commission must have a basis for estimating future revenue  
17                    requirements." page 10

18           Regarding what items should be included in the test year, the Commission  
19           quoted the following:

1                    "For ratemaking purposes, only just and reasonable expenses are  
2                    allowed; only used and useful property (with certain exceptions) is  
3                    permitted in the rate base." page 10 (Emphasis added.)

4    **Q.     Does the same Dr. Phillips give us a guide as to how the**  
5                    **abovementioned "basis" is to be determined?**

6    **A.     Yes. He states:**

7                    "...the commission must have a basis for estimating future revenue  
8                    requirements. This estimate is one of the most difficult problems in  
9                    a rate case. A commission is setting rates for the future, but it has  
10                    only past experience (expenses, revenues, demand conditions) to  
11                    use as a guide." 1984 edition, page 182 (Emphasis added.)

12   **Q.     Does utilization of past expenditures in order to determine normal**  
13                    **test year expenditures for ratemaking purposes violate the known**  
14                    **and measurable standard, as has been suggested by a Utilities, Inc.**  
15                    **witness in the CWS proceeding?**

16   **A.     No, of course not. However, not testing actual test year expenditures**  
17                    **does violate the known and measurable standard because, though the**  
18                    **expenditure is obviously known, it must be determined if it is**  
19                    **representative of future expenditures (measurable). If it is not**  
20                    **representative, then, it must be adjusted. As quoted in the CWS Order:**

21                    "...[w]here an unusual situation exists which shows that the test  
22                    year figures are atypical and thus do not indicate future trends, the  
23                    Commission should adjust the test year data." page 47 (Emphasis  
24                    added.)

1    **Q.    How does one show that a test year figure is “atypical”?**

2    A.    A widely accepted methodology is to compare the test year data with prior  
3           years’ data. If a significant variance is evident, then a determination must  
4           be made as to the cause of the variance and a decision must be made  
5           whether to adjust the test year data.

6    **Q.    What do you consider to be a “significant variance”?**

7    A.    Though the answer to this question is a matter of informed judgment, I  
8           generally consider a variance in expense from year-to-year of over 10%,  
9           well above the recent inflation rate, to be significant. It is important to  
10          consider the percentage variance rather than the absolute variance in  
11          dollars because a large dollar variance may not necessarily mean there is  
12          a large percentage variance, especially when working with large numbers.  
13          Again, what is important is that the expense used for ratemaking purposes  
14          is representative of future conditions and is just and reasonable,  
15          otherwise, rates will be artificially high.

16   **Q.    In your opinion, is it necessary to show that the questionable**  
17          **expense will decrease over time?**

18   A.    No. I do not know how one goes about showing with certainty that an  
19          expense will decrease over time. But it is not difficult to show that a test  
20          year expense, when compared to prior years, is skewed.

1   **Q.     Should the Commission not consider an adjustment to an expense**  
2       **which has risen consistently over the past few years?**

3   A.    No.  It is to be expected that expenses will increase by some small  
4       amount each year due to inflation and other factors.  It is the large  
5       increases about which the Commission should be concerned, especially  
6       for such a small utility.  Unless the company can prove that the test year  
7       expense is just and reasonable, it is open to adjustment for ratemaking  
8       purposes.

9   **Q.     Mr. Bleiweis, you recommend below a number of adjustments to test**  
10       **year expenses which have risen considerably over the past three**  
11       **years or which show significant variability.  Were there some cases**  
12       **where you did not make adjustments, even though there were large**  
13       **percentage increases?**

14  A.    Yes.  For example, even though insurance expenses rose considerably  
15       over the three-year period, I do not recommend that any adjustments be  
16       made since these increases are consistent throughout the utility industry.  
17       I have only made adjustments to those expenses for which the variance  
18       has not been adequately explained.

1    **Q.    Have you made comparisons of test year expenses with prior years'**  
2       **expenses?**

3    A.    Yes. I compared test year expenses with those of the two prior years,  
4       1999 and 1998, utilizing general ledger data provided in response to CA  
5       Interrogatories 1-7(b) and 1-37. The results of those comparisons,  
6       company replies to data requests and proposed adjustments follow.

1 **IV. TEST YEAR ADJUSTMENTS**

2 **A. Account #6338001-Legal Fees**

3           2000-\$2,490           1999-\$143           1998-\$1,760

4           The reply to CA Interrogatory 2-4 states: "In 2000 UUC incurred additional  
5           attorney fees relating to the Valleybrook Consent Order with DHEC."

6           Obviously, these fees are related to an extraordinary occurrence<sup>1</sup> (since  
7           they are described as being "additional" and when compared to the prior  
8           year) and should be deferred over a five-year period. As shown on  
9           Schedule MAB-3 , such a deferral results in pro forma test year expense  
10          of \$498, and a \$1,992 downward adjustment to expense (\$2,490-\$498).

11 **B. Account #6019020-Salaries Charged to Plant-WSC**

12           2000-\$ (13,390)   1999-\$ (38,445)   1998-\$ (10,037)

13          The reply to CA Interrogatory 2-8 states: "The account listed above is  
14          used to track employee's time spent on actual projects (Capitalized Time).  
15          As employees spend more or less time on projects that are tracked for  
16          Cap. Time this number will fluctuate."

17          For this account, the company admits that the amount of capitalized  
18          salaries fluctuates over time. The higher the amount of capitalized

---

<sup>1</sup> The reply to C.A. 4-6 states that the entire amount of \$2,490 was related to the Valleybrook Consent Order.

1 salaries, the higher the net income; the lower the amount of capitalized  
2 salaries, the lower the net income. Therefore, because of this fluctuation,  
3 in order to reflect a representative expense offset for ratemaking  
4 purposes, I recommend that the Commission utilize a three-year average  
5 of actual capitalized salaries. The use of such an average is common in  
6 ratemaking proceedings in instances where the test year number shows  
7 no trend either upward or downward. As shown on Schedule MAB-4, use  
8 of a three year average results in a pro forma test year expense offset of  
9 \$(20,624), a \$(7,234) increase to the offset. (Pro forma plant should also  
10 be increased by \$7,234.)

11 **C. Account #6708000-Uncollectible Accounts**

12           2000-\$11,194           1999-\$7,677           \$1998-3,043

13           The reply to CA 2-10 states: "This account has increased because more  
14 customers did not pay their bills in 2000 when compared to 1999."

15           This account, which is also known as Bad Debt Expense, is supposed to  
16 represent the company's (and its auditors') estimate of an annual amount  
17 of outstanding bills that will not be paid during a 12-month period. It is not  
18 a "write-off"; it is not an exact amount; and it is subject to some judgment.  
19           The large increase in this account over the past three years as shown  
20 above, both in terms of dollars and percentage, is very unusual for a  
21 company of this size, which has a fairly stable customer base.

1       The cause of this increase is unknown but it is not unusual for companies  
2       to periodically "clean up" their accounts which results in unusually high  
3       bad debt expense. Support for a possible clean up can be seen by  
4       looking at uncollectible expense for 1997 and 1996 which was \$9,364 and  
5       \$6,887, respectively, and the fact that the 1998 expense, the lowest of the  
6       three years, occurred in the year of the highest revenues over the three-  
7       year period. (Consideration should also be given to the fact that the  
8       uncollectible ratio used in the CWS rate case was 0.5864%, much lower  
9       than the ratio utilized below.)

10       It is common regulatory practice to determine test year uncollectible  
11       expense by utilizing an average over time of the relationship between  
12       uncollectible expense and revenues. Utilizing an average over time,  
13       rather than during just the test year, as is current Commission practice,  
14       smoothes out variations during the period and results in a more  
15       representative expense for ratemaking purposes. Revenues for the three-  
16       year period 1998-2000 totaled \$1,112,155 while uncollectible expense  
17       totaled \$21,914, or a ratio of 1.97% ( $\$21,914/\$1,112,155$ ). As shown on  
18       Schedule MAB-5, applying this ratio to test year revenue under present  
19       rates of \$360,283 results in pro forma uncollectible expense of \$7,099, a  
20       downward adjustment of \$4,095 ( $\$11,194 - \$7,099$ ) from actual test year  
21       expense. The same ratio should be applied to pro forma revenue under  
22       proposed rates when that revenue is determined.

1   **D. Account #6369003-Temp Employ-Clerical**

2           2000-\$1,823           1999-\$142           1998-\$102

3           The reply to CA 2-11 states: "This increase reflects the higher costs of  
4           using temporary employees and the increased usage of temporary  
5           employees to perform clerical duties."

6           A comparison of the numbers above, which are consistent for two of the  
7           three years, shows conclusively that the test year expense is an anomaly  
8           and should be adjusted. The company had the opportunity to explain why  
9           there was a need to increase the usage of temporary employees and  
10          whether this situation will continue in the future but chose not to do so.  
11          Therefore, as shown on Schedule MAB-6, I recommend that a three-year  
12          average of the actual expenses be utilized for ratemaking purposes,  
13          resulting in pro forma test year expense of \$689 and a downward  
14          adjustment to expense of \$1,134 (\$1,823-\$689).

15   **E. Account #6759003-Computer Supplies**

16           2000-\$2,199           1999-\$1,269           1998-\$885

17           The reply to CA 2-14 states: "This increase is from increased costs and  
18           increased need of computer equipment."

19           The increases in computer costs of 43.4% between 1998 and 1999 and  
20           72.3% between 1999 and 2000 are, needless to say, far above the 2%-3%

1 rate of inflation. The company gives no credible reason for the increases  
2 except to say the costs and need increased. Most costs increase over  
3 time but not by the exceptional percentages stated above. In order for  
4 rates to be just and reasonable (as discussed above), a three-year  
5 average of computer supply costs should be utilized for ratemaking  
6 purposes. As shown on Schedule MAB-7, such an average results in pro  
7 forma test year expense of \$1,451, or a downward adjustment to expense  
8 of \$748 (\$2,199-\$1,451).

9 **F. Account #6759135-Operations Telephone**

10 2000-\$5,722      1999-\$3,926      1998-\$2,966

11 The reply to CA 2-16 states: "This account increased due to increased  
12 usage and costs."

13 The above reply does not give the Commission or the parties sufficient  
14 understanding as to why telephone usage and costs increased 32.4%  
15 between 1998 and 1999 and 45.7% between 1999 and 2000. These  
16 increases are exceptional and the test year amount should be adjusted to  
17 reflect a reasonable expense for ratemaking purposes. As shown on  
18 Schedule MAB-8, use of a three-year average results in pro forma test  
19 year expense of \$4,205, or a downward adjustment to expense of \$1,517  
20 (\$5,722-\$4,205).

1 **G. Account #6759507-Water Main Breaks**

2           2000-\$1,600           1999-\$0           1998-\$0

3           The reply to CA 2-17 states: "This account balance consists of two  
4           invoices for repairing main breaks. UUC considers these as ordinary  
5           expenses, as such they are expensed when incurred. There were no  
6           expenses booked to account #6759507 in 1999 or 1998."

7           This account is a perfect example of why some test year accounts should  
8           be adjusted for ratemaking purposes to reflect a "normal" level of  
9           expenditures. It is certainly normal that some number of main breaks will  
10          occur over time; what is not known is what that number will be. It is also  
11          proper for the company to expense such expenditures since they can be  
12          deemed to be "ordinary" expenditures. However, since no amounts were  
13          charged to this account in the prior two years, it is clear that the test year  
14          expense is extraordinary and should be adjusted for ratemaking purposes  
15          by taking a three-year average of actual expenditures. As shown on  
16          Schedule MAB-9, use of a three-year average results in pro forma test  
17          year expense of \$533, a downward adjustment to expense of \$1,067  
18          (\$1,600-\$533).

1    **H. Account #6759509-Water-Water Elec Equipt Repair**

2            2000-\$706            1999-\$0            1998-\$0

3            The reply to CA 2-18 states: "There was one charge in 2000 for a service  
4            call and wiring repair. UUC considers these as ordinary expenses, as  
5            such they are expensed when incurred. There were no expenses booked  
6            to account #675950(9) in 1999 or 1998."

7            Similar to the discussion for Account #6759507 above, this account should  
8            also be averaged for ratemaking purposes since the test year expense is  
9            obviously extraordinary. As shown on Schedule MAB-10, use of a three-  
10           year average results in pro forma test year expense of \$235, a downward  
11           adjustment to expense of \$471 (\$706-\$235).

12    **I. Account #7754006-Sewer-Maint Repairs**

13           2000-\$21,128           1999-\$7,885           1998-\$8,051

14           The reply to CA 2-19 states: "In 2000 UUC had employees perform repair  
15           jobs instead of contracting them out. In order to complete these repairs  
16           UUC had to purchase Materials & Supplies. The increase can therefore  
17           be attributed to increased purchases and higher prices."

18           The extraordinary nature of this increase is explained in the above reply  
19           and shown by comparison of the test year expense to the two prior years,  
20           which were much lower. Again, sewer maintenance repairs are to be

1 expected, but the test year should only represent a normal level of  
2 expenditure. In this case the test year amount is clearly abnormal and  
3 should be adjusted. As shown on Schedule MAB-11, use of a three-year  
4 average results in pro forma test year expense of \$12,355, a downward  
5 adjustment to expense of \$8,773 (\$21,128-\$12,355).

6 **J. Account #7754007-Sewer-Main Breaks**

7           2000-\$1,650           1999-\$0           1998-\$ (151)

8           The reply to CA 2-20 states: "There was a broken pipe that connected to a  
9           manhole that needed to be repaired. UUC considers this an ordinary  
10          expense; as such it was expensed when incurred. There were no  
11          expenses booked to account #6759507."

12          This account should be handled similarly to Account #6759507-Water  
13          Main Breaks, discussed above, especially since there were no charges  
14          during the past two years, by utilizing a three-year average. As shown on  
15          Schedule MAB-12, use of a three-year average results in pro forma test  
16          year expense of \$500, a downward adjustment to expense of \$1,150  
17          (\$1,650-\$500).

1    **K. Account #7754009-Sewer-Elec Equipt Repair**

2            2000-\$10,022            1999-\$1,091            1998-\$1,086

3            The reply to CA 2-22 states: "Multiple blower motors went out in 2000 that  
4            needed to be repaired."

5            This account is similar to Account #6759509-Water-Water Elec Equipt  
6            Repair above. In this case, there was a large test year expenditure after  
7            two years of almost identical, much lower expenditures. The test year  
8            expenditure is clearly abnormal and should be adjusted. As shown on  
9            Schedule MAB-13, use of a three-year average results in pro forma test  
10           year expense of \$4,066, a downward adjustment to expense of \$5,956  
11           (\$10,222-\$4,066).

12    **L. Account #7754011-Sewer-Sewer Rodding**

13           2000-\$24,522           1999-\$13,680           1998-\$11,167

14           The reply to CA 2-23 states: "More calls were received in 2000 than in  
15           1999 to perform sewer rodding."

16           This account shows another variation of why an average expense should  
17           be utilized for ratemaking purposes. In this case, it is evident, as  
18           explained above, that the sewer rodding expense is directly related to the  
19           number of calls. Since it is unknown whether the number of calls will  
20           increase or decrease in future years, it is proper to calculate an average

1 as being a representative expense, especially considering the over 79%  
2 test year increase. As shown on Schedule MAB-14, use of a three-year  
3 average results in pro forma test year expense of \$16,456, a downward  
4 adjustment to expense of \$8,066 (\$24,522-\$16,456).

5 **M. Account #6759018-Operators-Other Office Expense**

6 2000-\$3,801 1999-\$1,483 1998-\$3,333

7 The reply to CA 2-24 states: "The increase i[n] this account is due to the  
8 additional cost of running several newspapers advertisements."

9 The company admits that the 156% increase in this account as compared  
10 to the year before is due to unusual, "additional" expenditures. Because  
11 of these abnormal expenditures (the company did not volunteer the  
12 purpose of these advertisements) and the variability of this account (as  
13 shown above), an average should be taken for ratemaking purposes. As  
14 shown on Schedule MAB-15, use of a three-year average results in pro  
15 forma test year expense of \$2,872, a downward adjustment to expense of  
16 \$929 (\$3,801-\$2,872).

17 **N. Account #6759080-Maint-Deferred Charges**

18 2000-\$509 1999-167 1998-\$0

19 The reply to CA 2-25 states: "The Maintenance-Deferred Charges account  
20 consists of one-twelfth of 20% of the Deferred Charges relating to Data

1 Request 2-2. As charges being deferred increases so does the  
2 amortization of that charge.”

3 In its reply to CA 2-2, the company explains that this deferral is due to “a  
4 first time ever lagoon cleaning (sludge hauling) charge”. Since this (\$432  
5 of the total \$509) appears to be an extraordinary charge, even though it is  
6 not clear how often lagoon cleaning will be necessary, similar to Account  
7 #6338001-Legal Fees described above, I agree that the charge should be  
8 deferred and amortized for ratemaking purposes.

9 Based upon the replies to CA 1-7(b) and 2-4, it appears that \$77 of the  
10 \$509 total amortization is for small tank maintenance jobs that occurred  
11 during 2000. The company has been consistent in deferring tank  
12 maintenance expense which it considers to be extraordinary and since the  
13 Commission has allowed deferral of similar expenses, it should be allowed  
14 here.

15 **O. Account #7352020-Sewer Tests**

16 2000-\$10,565      1999-\$7,484      1998-\$7,897

17 The reply to CA 2-27 states: “The lab that UUC was using was decertified  
18 and the new lab that was used, on an emergency basis, was more  
19 expensive.”

20 It is clear from the above reply that, since the new lab was used “on an  
21 emergency basis”, the test year expense is abnormally high, especially

1       when compared to the two prior years. As shown on Schedule MAB-16 ,  
2       use of a three-year average for this account results in pro forma test year  
3       expense of \$8,649, a downward adjustment to expense of \$1,916  
4       (\$10,565-\$8,649).

5    **P. Account #6501020-Gasoline**

6       2000-\$5,995       1999-\$3,394       1998-\$5,025

7       The reply to CA 2-28 states: "This increase is due to an increase in prices  
8       and increased usage."

9       The variability in this account over the three-year period is shown above  
10      and, therefore, it is obvious that test year gasoline expense is not  
11      representative of future periods. Further, the Commission should consider  
12      the fact that the price of gasoline has declined since the test year.  
13      Because of this variability, it is proper to reflect a three-year average of  
14      actual gasoline costs for ratemaking purposes. As shown on Schedule  
15      MAB-17, use of a three-year average results in pro forma test year  
16      expense of \$4,805, a downward adjustment to expense of \$1,190 (\$5,995-  
17      \$4,805).

1    **V. OTHER ADJUSTMENTS**

2    **A. Employee Bonuses**

3    **Q.     Did the Commission rule on the issue of employee bonuses in the**  
4           **Carolina Water Service rate case?**

5    A.     Yes. In its Order No. 2001-887 for the recent Carolina Water Service  
6           (CWS) rate case (Docket No. 2000-207-W/S), the Commission removed  
7           from test year expenses bonuses that were paid to CWS and WSC  
8           (service company) employees because "employee bonuses should be the  
9           responsibility of the shareholders and not the ratepayers." (page 29)

10   **Q.     Is there a similar issue in this proceeding?**

11   A.     Yes. In this proceeding, according to the reply to CA 4-3, test year  
12           expenses include bonus payments of \$241 to UUC employees and  
13           allocated WSC bonuses of \$74. Employee bonuses should be the  
14           responsibility of the shareholders and not the ratepayers. Therefore, as  
15           shown on Schedule MAB-21 , a total of \$315 should be eliminated from  
16           test year expenses for ratemaking purposes.

17   **B. Pro Forma Plant**

18   **Q.     Has the company included a rate base claim for pro forma plant?**

19   A.     Yes. As shown on Schedule C, page 1, of the Application (as revised),  
20           \$87,353 has been included in rate base for pro forma plant. The reply to

1 CA 1-34 shows that \$45,000 of the total is for new digestors and the  
2 remaining \$42,353 is for a portable generator.

3 **Q. What is the estimated completion date for these projects.**

4 A. The estimated completion date is December, 2001, almost one year after  
5 the end of the test year for this proceeding.

6 **Q. Were any funds spent on these projects during the test year?**

7 A. No. In his Direct Testimony at page 6, Mr. Lubertozi states that:

8 "The other rate base adjustment indicated on Schedule C is to  
9 reflect capital projects that were underway but not yet complete as  
10 of the end of the test year." (Emphasis added.)

11 However, Mr. Lubertozi is mistaken that the projects were underway.

12 **Q. How do you know that Mr. Lubertozi is mistaken?**

13 A. First, the company's balance sheet at December 31, 2000 (Application  
14 Exhibit B, Schedule A) shows a zero balance for Construction Work In  
15 Progress. If either project had been underway, the balance would have  
16 been greater than zero.

17 Second, the reply to CA 1-6 emphatically states that:

18 "No construction was being performed as of December 31, 2000."

1    **Q.    Why is it significant that the projects were not underway as of the**  
2                    **end of the test year?**

3    A.    In its Order for CWS , the Commission disallowed claimed pro forma plant  
4                    because:

5                    "... the adjustment does not reflect actual completed additions to  
6                    plant but rather estimates of the plant projects under construction  
7                    that are not yet completed." page 53

8                    In this case, not only are the projects not completed but they were not yet  
9                    even underway as of the end of the test year.

10   **Q.    What do you recommend?**

11   A.    As shown on Schedule MAB-26, I recommend that the company's pro  
12                    forma plant in the amount of \$87,353 be disallowed for ratemaking  
13                    purposes. Also, as shown on Schedule MAB-19, the related depreciation  
14                    on this plant should be similarly disallowed resulting in a \$1,310 downward  
15                    adjustment to expense.

16   **C. Accumulated Depreciation**

17   **Q.    Has the Accumulated Depreciation balance, as shown on Schedule C**  
18                    **of the Application, which is included in rate base, been adjusted for**  
19                    **the company's annualized depreciation adjustment?**

20   A.    No. In simple terms, the Accumulated Depreciation balance is the running  
21                    total of depreciation taken on plant- it is an offset to the plant balance. If

1 depreciation expense is adjusted, Accumulated Depreciation should be  
2 adjusted also. In its reply to CA 1-35, the company stated that:

3 "...the Accumulated Depreciation balances shown on Schedule C  
4 of the Application have been adjusted to reflect annualized  
5 depreciation."

6 However, this is a misstatement. If the Accumulated Depreciation rate  
7 base balance had been adjusted, then the rate base balance would have  
8 been larger (a larger negative) than the year-end book balance. This is  
9 not the case. If the test year-end book accumulated depreciation balance  
10 shown on the balance sheet on Schedule A of the Application is compared  
11 to the rate base balance on Schedule C, page 1, the balances are the  
12 same negative \$229,884. Therefore, the book balance was not adjusted.

13 **Q. What do you recommend?**

14 **A.** As shown on Schedule MAB-1, I have increased the Accumulated  
15 Depreciation balance by negative \$3,855. As shown on Schedule MAB-  
16 19, (Depreciation Expense), this adjustment is composed of two parts.  
17 First, the balance has been increased by the annualized depreciation  
18 adjustment of \$5,165. Second, the balance has been decreased by not  
19 allowing depreciation to be taken on Pro Forma Plant, as discussed  
20 above.

1    **D. Utility Commission Expense**

2    **Q.    What adjustment is the company proposing to make to the**  
3       **Utility/Commission Tax?**

4    A.    The company is proposing to increase the Utility/Commission Tax by an  
5       estimated five percent, or a total of \$223. It is a widely followed regulatory  
6       principle that rates should be based on "known and measurable" data.  
7       Ratepayers should only have to pay for expense levels that are known to  
8       exist in order to avoid possible windfalls to the utility. Even though this  
9       adjustment is relatively small, in my opinion, it is important for the  
10       Commission to recognize that just and reasonable rates should only be  
11       based upon data that can be supported by fact.

12   **Q.    What do you recommend?**

13   A.    Since the company's claim is not known and measurable, it should be  
14       rejected for ratemaking purposes. In its CWS Order at page 43, the  
15       Commission stated:

16               "Witness Bleiweis was correct in his assessment that an 'estimated'  
17               increase to a tax does not meet the 'known and measurable'  
18               standard."

19       As shown on Schedule MAB-18, this results in a \$223 downward  
20       adjustment to expense.

1    **E. Revenue Annualization/Customer Growth Adjustment**

2    **Q.    Has the company included an adjustment to either annualize**  
3       **revenues or reflect customer growth?**

4    A.    No. The company has neither annualized revenues nor adjusted net  
5       income for customer growth.

6    **Q.    Why is a revenue adjustment necessary?**

7    A.    In this proceeding, the company has presented adjustments to annualize  
8       expenses for salaries, wages and benefits, depreciation and taxes other  
9       than income taxes as of the end of the test year. Since expenses have  
10       been annualized as of the end of the test year, it would be a regulatory  
11       and financial mismatch not to annualize revenues at the same point in  
12       time. By not annualizing, the company has reflected revenues based  
13       upon the average number, rather than the year-end number of test year  
14       customers. It is unfair to customers to determine rates by not accounting  
15       for growth in the number of customers during the test year.

16   **Q.    How is a revenue annualization adjustment determined?**

17   A.    For water utilities, the normal method would be to multiply the year-end  
18       number of customers by average consumption and then use the tariffs to  
19       price out the service and consumption charges. For sewer utilities, the  
20       normal method would be to multiply the number of year-end customers by  
21       the applicable tariff charges.

1 Q. Have you been able to determine a revenue annualization  
2 adjustment?

3 A. No. Because of some anomalies between the data provided by the  
4 company and test year numbers of customers, I have been unable to  
5 calculate a revenue annualization adjustment.

6 Q. For purposes of this testimony, have you utilized another method  
7 that calculates customer growth?

8 A. Yes. On Schedule MAB-20, I have calculated a customer growth  
9 adjustment by applying the increase in the number of customers from  
10 12/31/99 to 12/31/00 to average revenue per customer.

11 In its Order for CWS at page 64, the Commission stated:

12 "The adjustment proposed by the Consumer Advocate only applies  
13 to revenues and not to expenses. The Commission believes that  
14 any adjustment for customer growth must necessarily also take into  
15 account increases in expenses."

16 Therefore, I have reduced the customer growth adjustment for the three  
17 expense categories which I believe could be, but not necessarily are,  
18 directly related to customer growth- uncollectible expense, purchased  
19 power expense and chemical expense.

20 The result is an upward adjustment to revenue of \$2,326 and a upward  
21 adjustment to income of \$1,839 after applying revenue-related expenses.

1           Again, though I am presenting this adjustment, I would prefer that a  
2           revenue annualization adjustment be calculated instead.

3   **F. Cash Working Capital**

4   **Q.    Has the company calculated a cash working capital balance to be**  
5           **included in rate base?**

6   A.    Yes. Cash working capital has been calculated by applying a percentage  
7           of 12.5%, representing an average expense lag time, to the total of O&M  
8           expense and taxes other than income taxes.

9   **Q.    Do you agree with this methodology?**

10 A.    I agree with applying a 12.5% factor against O&M expense but not with  
11           applying the factor to taxes other than income taxes.

12 **Q.    Why is it improper to apply the factor to taxes other than income**  
13           **taxes?**

14 A.    In rate proceedings, two major methodologies are used to determine cash  
15           working capital. The preferred method is a lead/lag study but this can be  
16           an expensive and time-consuming proposition for a small utility. The  
17           alternative methodology is to apply the 12.5% factor (45 days divided by  
18           360 days) to operation and maintenance expenses. In my experience, I  
19           have never seen the 12.5% factor applied to taxes other than income

1 taxes in a rate proceeding because this factor is supposed to represent  
2 the lag for O&M expenses only.

3 In its Order in the CWS proceeding at page 61, the Commission stated:

4 "The Commission agrees that a 12.5% factor should be applied to  
5 O&M expense only, exclusive of Taxes Other Than Income."

6 **Q. What do you recommend?**

7 A. As shown on Schedule MAB-27 , according to Commission precedent, I  
8 recommend that the 12.5% factor be applied only to test year adjusted  
9 O&M expense. The result is a \$11,234 downward adjustment to rate  
10 base.

1 **VI. OTHER TOPICS**

2 **A. Pro Forma Salaries**

3 **Q. What amount of pro forma salaries is the company claiming for this**  
4 **proceeding?**

5 **A.** As shown on Schedule B, page 1, of the Application, in the Pro Forma  
6 Present column, the company is claiming the following pro forma salary  
7 expenses: Maintenance- \$114,707 and General- \$17,409- or a total of  
8 \$132,116.

9 **Q. At your request, did the company provide a workpaper supporting**  
10 **these figures?**

11 **A.** The company did provide a workpaper in response to CA 1-14(a) but as  
12 discussed below, I do not believe the workpaper supports the company's  
13 claim.

14 **Q. Why do you believe that the salary claim is unsupported?**

15 **A.** The workpaper provided by the company is virtually undecipherable and is  
16 incomplete. The \$114,707 maintenance salary number can be seen  
17 under the Total Annualized Salary column. As shown, this number is  
18 composed of two parts: maintenance salaries and supervisory salaries.  
19 The allocation percentages for the seven maintenance employees are

1 shown in the middle of the page but the allocation percentages for the  
2 three supervisory employees are not shown at all.

3 Further, the pro forma general expenses salaries of \$17,409, is not shown  
4 at all on this worksheet leaving the parties to guess how it was  
5 determined. It is my conjecture that the general salaries are composed of  
6 two parts: \$10,387 for allocated South Carolina (CWS) office salaries and  
7 \$7,022 allocated service company (WSC) salaries.

8 CA 4-1(b) requested the company to provide workpapers supporting the  
9 CWS Office allocation. The company replied:

10 "There are no workpapers supporting the \$10,387 other than the  
11 ones previously provided."

12 If there are no workpapers, then how is the Commission and the parties to  
13 know how this number was determined and whether it should be accepted  
14 for ratemaking purposes?

15 Similarly, CA 4-1(c) requested the company to support the \$7,022 WSC  
16 allocation. The company replied that the support could be found in the  
17 WSC allocation book. After my review of this voluminous book, it is not at  
18 all clear how it supports this specific allocation.

1    **Q.    Is there also another issue regarding salaries?**

2    A.    Yes.  CA 2-9 requested the company to explain the 68% increase in  
3           Illinois administrative salaries allocated to UUC between 1999 and the test  
4           year.  The company replied that:

5                   "...the increase reflects a change in account coding.  In 1999 this  
6                   account was coded UI whereas in 2000 this account was coded to  
7                   WSC."

8           When asked to provide a further explanation of this change, the reply to  
9           CA 4-7 stated that:

10                   "...certain expenses were coded to UI in 1999 that were coded to  
11                   WSC in 2000 which increased the allocation base."

12           I take this "explanation" to mean that expenses that used to be allocated  
13           to the parent corporation (UI) and, therefore, not allocated to the  
14           subsidiaries, are now being charged to the service company (WSC) and  
15           further allocated to subsidiaries such as UUC and ultimately passed on to  
16           ratepayers.  The company has not explained why the change in coding  
17           occurred.  It appears that a simple change in coding can be very costly to  
18           ratepayers.

19   **Q.    What do you recommend?**

20   A.    The burden of proof is upon the company to support all of the revenue,  
21           expense and rate base data that is included in its filing and that is the  
22           basis for its rate request.  In the areas of Maintenance Supervisory and

1 General Expense pro forma salaries, as discussed above, the company  
2 has simply not met its burden of proof. Its adjustments do not meet the  
3 "known and measurable" standard and results in rates that are not just  
4 and reasonable. Therefore, as shown on Schedule MAB-22, I recommend  
5 that the company's proposed pro forma Supervisory Maintenance and  
6 General Expense salary increases of \$4,377 and \$2,067, respectively, be  
7 disallowed.

8 **B. WSC Expenses**

9 **Q. Can you provide the Commission with the amount of expenses that**  
10 **were allocated from the service company (WSC) to UUC during the**  
11 **test year?**

12 **A. Yes. Based upon the reply to CA 1-37, the following test year expenses**  
13 **were allocated to the company:**

14 Operators Salaries- \$108,006

15 Office Salary- \$8,320

16 Benefits & Taxes- \$28,696

17 Computer Costs- \$2,375

18 Insurance Expense- \$10,613

19 Common Expenses- \$16,625

20 These expenses, which total \$174,635, are included in the determination  
21 of the company's rates.

1    **Q.    How does this total compare to the test year per book total operating**  
2           **expenses?**

3    A.    As shown on Schedule B, page 1 of the Application, test year operating  
4           expenses totaled \$426,299. Therefore, about 41% of the company's per  
5           book expenses were allocated to it from the service company.

6    **Q.    Why are you bringing these figures to the Commission's attention?**

7    A.    I want the Commission to understand the magnitude of the expenses that  
8           are allocated to the company rather than expended by the company itself.

9    **Q.    Have you prepared a schedule to show the Commission the types of**  
10          **Common Expenses that are allocated to the company?**

11   A.    Yes. Schedule MAB-28, shows a breakdown of the \$16,627 of Common  
12          Expenses allocated to the company during the test year. I have sorted  
13          these expenses from highest to lowest for the Commission's convenience.

14          Again, I would emphasize that all of these expenses were allocated to the  
15          company from the Illinois service company. For example, the largest  
16          allocation is for service company salaries in the amount of \$5,956.

17          The second largest amount is \$2,350 for intercompany interest. It is  
18          unclear to me how this interest relates to the pro forma interest on debt of  
19          \$47,401 which the company is claiming in this proceeding.

1   **Q.    Are there certain allocations which you question the propriety of**  
2       **being included in the company's rates and, therefore, supported by**  
3       **its ratepayers?**

4   **A.    Yes.** For example, I question whether UUC ratepayers should support  
5       expenditures for such items as other office maintenance, tax return  
6       review, employment finder fees, landscaping, moving, snow, etc. The  
7       threshold question is: do UUC customers benefit from such expenditures?  
8       I would answer that the benefits are uncertain. The service company  
9       would argue that it can supply services to UUC cheaper than the company  
10      could itself. There is some truth to that statement. However, the  
11      Commission must determine whether every dollar of service company  
12      expenditures benefits ratepayers.

13   **Q.    What do you recommend?**

14   **A.    As shown on Schedule MAB-23, I recommend that the Commission**  
15       disallow the \$997 of expenditures shown here so as to emphasize to the  
16       company that the burden of proof for each and every allocation dollar is  
17       upon them. I would also recommend that in the next UI subsidiary rate  
18       case to come before this Commission, that the company be required to  
19       testify as to how the allocations are determined and the resulting benefits  
20       from these allocations.

1 Q. Does this conclude your Direct Testimony?

2 A. Yes, it does.

**MICHAEL A. BLEIWEIS**  
**CONSULTING EXPERIENCE**

**IDAHO**

Idaho Electric Company ) ..... Docket Nos.: 100726)
